SUBJECT INDEX

A

Air Force Geophysical Laboratory

infrared observations at, 348

Aluminum ²⁶

planetary evolution and, 303, 304

Ammonia

Venus atmosphere content of, 149

Argon

isotropic structure and, 318, 319

Asteroids, 33-72

asteroidal collisions, 45-52

asteroid rotations, 48, 49

C and S types and, 47

catastrophic collisions,

46, 47

cratering, 46

erosion and fragmentation, 45-48

erosive collisions, 46

fragment accretion, 48, 49

fragment size distribution,

46, 47

Hirayama families of asteroids, 46, 48

jet streams and, 48

asteroid taxonomies, 42

dynamics and orbital evolution, 49-68

Apollo, Amor, and Mars-crossing asteroids, 66-68

Apollo objects, 60, 61

Apollos and Mars crossers, 52, 53

argument of perihelion:

libration, 60

catalogues and selection

effects, 63-65

comet influences, 57

commensurabilities and

Kirkwood gaps, 49-59

debris reaching Earth, 61

depopulation of secular

resonance gaps, 60

Earth-approaching asteroids, 66

families of asteroids, 65,

66

Hildas and Hilda-type asteroids, 50, 52, 54

horseshoes, 54

Jupiter's influences, 50,

54-58, 61, 65, 67

librating asteroids, 50,

55-59

Mars' influences, 50, 59-61

material transport from asteroid belt, 60, 61

meteorite source mechanism, 61

Ovenden's hypothesis, 62, 63

phase mixing of initial asteroid distribution

theory, 56

planetary masses, 63

Poisson's theorem, 62,

63

principle of "least interaction actions," 62

resonance transportation, 61

secular perturbations,

59

secular resonances, 59,

60

shallow resonances, 50

"stability" of orbits, 57

Trojans, 51, 54

Yarkovsky effect, 61

interferometer observations of, 88

modern era of studies of,

33

physical studies of, 33

sizes and mineralogical

composition, 33

TRIAD file on asteroids,

34, 35, 40

observational characteristics, 34-45

absolute magnitudes of,

34

astronomical observations

of surface composition,

39, 40

best-known diameters,

38

B magnitude of, 34

colors of asteroids, 39, 40

compositional interpretation, 40, 41

compositional types, 41-43

diameter direct measurement, 36

diameters and albedos, 36,

37

ecliptic latitude and longitude, 36

Gehrels' correction, 34,

35

light curves and, 35

main belt of asteroids, 43

masses and densities, 38,

39

occultation of stars by,

36, 37

opposition effect and, 34

"photometric astronomy,"

36

photometry and, 34, 35

polarimetric method, 37,

38

radiometric method, 37, 38

rotation and, 35, 36

size distribution, 44, 45

spectrophotometry and

surface composition, 39-

43

spin axes and, 36

"spottedness" and, 35

standard UBV system and,

34

surface textures and regoliths, 43, 44

thermal modelling assumptions, 37

radar cross sections of, 282

radar observations of, 281-

83

radar study of physical

properties of, 265

ramifications for planetary

evolution, 68-72

asteroids as planetesimals,

68, 69

bombardment and planet

mass, 70

early orbital evolution,

69, 70

exploded planet and origin

of asteroids, 70

- failure of asteroids to grow, 70
 geochemical evolution of asteroids, 71, 72
 heating processes in asteroids, 72
 lunar cratering record, 69
 objects between Jupiter and Saturn, 69, 70
 rotation of, 282
 surface scattering by, 283
 types of, 41, 42
- B**
- Basaltic achondrites
 large asteroid Vesta and, 71
- Berkeley and Goddard Space Flight Center
 infrared observations by, 346
- Beta cephei stars
 see Cephei, β stars
- Big bang
 nucleosynthesis in helium and, 317
- Binaries
 pulsating
 gravitational radiation and, 525
- Black holes
 formation of, 525
 gravitational waves from, 528
 in X-ray binaries, 261
 stellar evolution and, 241
- C**
- Callisto
 see Galilean satellites
- Carbon
 abundance in novae, 206-8
 carbon main sequence stars, 23
 ignition of
 low mass stars and, 26
 infrared emission bump
 postmaximum novae and, 204
 nebular
 ionization of, 473-75
 nova outbursts and, 194-96
- Carbon compounds
 asteroid content of, 41
- Carbon dioxide
 opacity of Venus atmosphere, 153
 origin of in Venus, 166
- radar studies through, 270
 Venus atmosphere content of, 148-51, 160-62, 164
- Carbon monoxide
 interstellar clouds and, 598, 599
- Cephei, β stars, observations of, 215-38
 classification of, 216
 conclusions concerning, 237, 238
 discovery of, 215
 general properties of, 216, 217, 220-31
 comparison between theory and observation, 220-31
 "core collapse zone" and, 221
 Hertzsprung-Russell Diagram and, 220-23, 227, 229
 hydrogen-burning stars, 224
 "hydrogen exhaustion phase" and, 221, 222
 instability mechanism of, 221-23
 "instability strip" occupation, 220-23, 233
 location in the HR diagram and evolutionary state, 220-24
 shell-burning phase of evolution, 222, 224
 spectroscopic characteristics, 220
 variability of, 221
 multiperiodic stars among, 216
 observational data for individual stars, 218-20
 tables of, 218, 219
 physical properties, 224-31
 Alpha Vir variable properties, 224
 classical β Cephei stars, 225
 evolutionary sequences and, 227, 229, 230
 galactic distribution and, 229
 Gould Belt system and, 228, 229
 lifetime in secondary contraction and core-burning phases, 229
 mass determination, 225, 226
 period-luminosity relation and pulsation mode, 229-31
- photometric temperature and luminosity, 225-27
 pulsation constant, 230, 231
 sample selection, 227, 228
 statistics and galactic distribution, 227-29
 stellar radii, 226, 227
 visual light amplitude-radial velocities relations, 230
- recent trends in observation, 231-37
 aberrant periods of line width, 235
 amplitude of variation and wavelength, 236
 asymmetry effects, 233
 difficulties in, 231
 double lines in spectra, 235
 high-resolution studies of profile variations, 233-35
 search for new variables, 231-33
 "still-stand" of light intensity, 237
 surveys for, 232
 table of candidates, 232, 233
 temperature variations in stars, 238
 time-series sequence of spectra, 234
 ultraviolet observations from spacecraft, 235-37
 width of spectral lines varying, 233
- Chemistry, interstellar
 introduction to, 592-94
- Chondrites
 origin of, 71
- Chondrites, carbonaceous
 cosmic role of, 320
 planetary noble gas in, 314, 316
- Clouds, molecular
 C II regions in, 475-80
- Comets
 chondrite origin and, 71
- Coronal physics, recent advances in, 393-425
 modeling of coronae and their structures, 405-18
 anisotropic bulk transport in, 406
 chromospheric radiation, 407, 408

- coronal and chromospheric activity, 407, 408
- coronal energy losses, 409, 410
- coronal formation mechanisms, 407-11
- coronal morphology and magnetic fields, 406, 407
- coronal structures analysis, 411-18
- emission measure analysis and diagram, 412, 414
- energy balance analysis and diagram, 413-15
- "guiding center" plasma in, 406
- loop longitudinal structure, 417, 418
- loop modeling, 415, 416
- loop radial structure, 416, 417
- loop structures, 406-10, 413-18
- magnetic-field-structured corona, 410, 411
- minimum flux corona, 408-10
- observational framework, 395-405
 - active vs. quiescent regions, 396, 398, 403
 - chromosphere-corona transition, 400, 401
 - corona activity on spatial temporal scales, 403-5
 - coronal currents, 398
 - coronal green, 403
 - coronal holes, 398, 402, 403
 - coronal radiative emission, 396, 402, 403
 - coronal spatial temperature and density, 396, 399, 401, 402
 - daily plots of solar activity, 404
 - implications for coronal physics, 405
 - key parameters compendium, 397
 - loops or arches in, 396, 398, 400
 - magnetic field topology, 396, 398, 401
 - solar magnetic field structuring the corona, 396-402
 - X-ray images of inner corona, 396-401
- overview of, 393-95
 - definition of corona, 394
 - "mini"-coronae, 395
 - stellar coronae studies, 418-23
 - chromosphere-corona relations, 420
 - emission measure analysis, 419-21
 - energy balance analysis, 421, 422
 - future observations of, 422, 423
 - modeling in, 419-22
 - observations, 418, 419
 - theoretical descriptions of, 422
 - summary, 423-25
 - comparison of Sun and Capella, 425
 - magnetic field role, 424
 - responsibility for formation of coronae, 423, 424
- Cosmic Background Explorer Satellite
 - instruments on, 359
- Cosmic rays
 - astronomic effects of, 306
 - solar phenomena and, 438-41
- D
 - Deuterium
 - ionization of, 600
 - Dwarfs, magnetic white, 487-517
 - description of individual objects, 488-504
 - AM Her, 496-99
 - AN UMa, 493-95
 - BPM 25114, 495
 - chemical substances in, 488, 491, 492, 497, 502, 503
 - DQ Her, 496
 - eclipse-like light curves, 491, 496
 - GD 90, 491
 - GD 229, 503, 504
 - Grw + 70°8247, 500-3
 - G 99-37, 490
 - G 99-47, 490
 - G 195-19, 492
 - G 227-35, 499-501
 - list of, 489
 - LP 44-112 = G 240-72, 495, 496
 - LP 790-29, 493
 - L 795-7 = Feige 7, 488, 490
 - PG 1015 + 01, 492
 - spectra of, 488-503
 - VV Puppis, 490, 491
 - origin and evolution of white dwarf fields, 504-7
 - convective carbon dynamo hypothesis, 505, 506
 - hydrogen in atmospheres, 505
 - internal fields strength, 504, 505
 - magnetic dipole component decay, 504
 - outer layers blown off, 505
 - previous history of, 505-7
 - pulsar magnetic fields and, 505
 - remains of magnetic Ap stars, 507
 - rotation periods and, 506
 - temperature distribution, 504
 - summary of studies of, 487, 488
 - surface effects of magnetic fields, 507-13
 - absorption troughs, 511
 - accreting magnetic white dwarfs, 509, 510
 - atmospheres, 508
 - chemical substances and, 507
 - continuum polarization and, 512, 513
 - helium and, 509-12
 - hydrogen and, 508-12
 - spectra and, 507-12
 - surface temperatures and, 507
 - Zeeman components and, 508, 509
 - white dwarf magnetic fields and accretion in cataclysmic variables, 513-17
 - accretion disc fate, 514, 515
 - accretion funnel emission, 515-17
 - accretion geometry, 513
 - gravitational potential energy, 513
 - hydrogen and, 513
 - magnetic effect on accretion, 514
 - polarized optical emission and, 516
 - white dwarf rotation synchronization, 515
 - X-ray flares, 514

- Dwarfs, white
nova outbursts, 191-96
- E
- Earth
interplanetary magnetic field and, 434
materials of
fractionation of, 298
- Ephemerides of Minor Planets
asteroids catalogued in, 63, 64
- Europa
see Galilean satellites
- F
- Fluorine
nova outbursts and, 193
- G
- Galaxies
structure of
kinematic studies of, 468, 469
- Galaxies, spiral and irregular,
kinematics of, 103-35
concluding remarks, 135
distribution and kinematics of gas, 106-12
Fabry-Perot interferometric methods, 109
galactic rotation and, 112, 161
galaxies with measured velocity fields, 106-8, 111
gas distribution, 109-11
observation methods, 108, 109
radio methods, 109
reduction procedures, 108
spiral arms and, 110
velocity fields, 111, 112
general rotation, 112-20
annular rings, 115
"best fit" curves, 114
bulge component, 115
density waves, 118
density wave theory model and, 116, 117
disk galaxies rotation, 113
edge-on galaxies, 120
galaxy morphological types, 115-17
halos around galaxies, 118, 119
local noncircular motions, 112
luminosities in each type, 116, 117
mass models of, 118, 119
rotation curve derivation, 112, 113
rotation curve shape, 115-17
rotation curves in outer parts of spiral galaxies, 117-19

CHAPTER TITLES, VOLUMES 12-16

PREFATORY CHAPTER

- About Dogma in Science and Other Recollections of an Astronomer
- The Development of our Knowledge of Variable Stars

E. J. Öpik 15:1-17

C. Payne-Gaposchkin 16:1-13

SOLAR SYSTEM ASTROPHYSICS

- Comets
- Surface Geology of the Moon
- Chemistry of Primitive Solar Material
- Physical Processes in Comets
- Mercury

B. G. Marsden 12:1-21
 F. El-Baz 12:135-65
 S. S. Barshay, J. S. Lewis 14:81-94
 F. L. Whipple, W. F. Huebner 14:143-72
 D. E. Gault, J. A. Burns, P. Cassen, R. G. Strom 15:97-126
 C. F. Kennel, F. V. Coroniti 15:389-436
 C. R. Chapman, J. G. Williams, W. K. Hartmann 16:33-75

- Jupiter's Magnetosphere
- The Asteroids

- Physical Properties of the Planets and Satellites from Radar Observations
- Isotopic Structures in Solar System Materials
- Results of Venus Missions

G. H. Pettengill 16:265-92
 F. A. Podosek 16:293-334
 M. Ya. Marov 16:141-69

SOLAR PHYSICS

- Solar Rotation
- The Solar X-Ray Spectrum
- Waves in the Solar Atmosphere
- The Origin of Solar Activity
- Large-Scale Solar Magnetic Fields
- Mass and Energy Flow in the Solar Chromosphere and Corona
- Recent Advances in Coronal Physics
- A View of Solar Magnetic Fields, the Solar Corona, and the Solar Wind in Three Dimensions

P. A. Gilman 12:47-70

 E. N. Parker 15:45-68
 R. Howard 15:153-73
 G. L. Withbroe, R. W. Noyes 15:363-87
 G. S. Vaiana, R. Rosner 16:393-428

STELLAR PHYSICS

- Post Main Sequence Evolution of Single Stars
- The Chemically Peculiar Stars of the Upper Main Sequence
- The Spectra of Supernovae
- Planetary Nebulae
- The Structure of Cataclysmic Variables
- Nonradial Oscillations of Stars: Theories and Observations
- Recent Observations of Pulsars

L. Svalgaard, J. M. Wilcox 16:429-43
 I. Iben Jr. 12:215-56
 G. W. Preston 12:257-77
 J. B. Oke, L. Searle 12:315-29
 J. S. Miller 12:331-58
 E. L. Robinson 14:119-42

J. P. Cox 14:247-73
 J. H. Taylor, R. N. Manchester 15:19-44

- Secular Stability: Applications to Stellar Structure and Evolution
- Theory and Observations of Classical Novae
- The Observational Status of β Cephei Stars
- Mass Loss in Early-Type Stars
- Magnetic White Dwarfs

C. J. Hansen 16:15-32
 J. S. Gallagher, S. Starrfield 16:171-214
 J. R. Lesh, M. L. Aizenman 16:215-40
 P. S. Conti 16:371-92
 J. R. P. Angel 16:487-519

DYNAMICAL ASTRONOMY

- Computer Simulations of Stellar Systems
- Unseen Astrometric Companions of Stars
- Radio Astrometry

S. J. Aarseth, M. Lecar 13:1-21
 P. van de Kamp 13:295-333
 C. C. Counselman III 14:197-214

Orbital Resonances in the Solar System	S. J. Peale	14:215-46
Theories of Spiral Structure	A. Toomre	15:437-78
INTERSTELLAR MEDIUM		
Cosmic-Ray Propagation in the Galaxy:		
Collective Effects	D. G. Wentzel	12:71-96
Coherent Molecular Radiation	M. M. Litvak	12:97-112
Large-Scale Dynamics of the Interstellar Medium	S. A. Kaplan, S. B. Pikel'ner	12:113-33
Radio Radiation from Interstellar Molecules	B. Zuckerman, P. Palmer	12:279-313
Ultraviolet Studies of the Interstellar Gas	L. Spitzer Jr., E. B. Jenkins	13:133-64
Young Stellar Objects and Dark Interstellar Clouds	S. E. Strom, K. M. Strom, G. L. Grasdalen	13:187-216
The Interstellar Magnetic Field	C. Heiles	14:1-22
The Interaction of Supernovae with the Interstellar Medium	R. A. Chevalier	15:175-96
Formation and Destruction of Dust Grains	E. E. Salpeter	15:267-93
Interstellar Scattering and Scintillation of Radio Waves	B. J. Rickett	15:479-504
Radio Recombination Lines	R. L. Brown, F. J. Lockman, G. R. Knapp	16:445-85
Gas Phase Reactions in Astrophysics	W. D. Watson	16:585-615
SMALL STELLAR SYSTEMS		
Consequences of Mass Transfer in Close Binary Systems	H.-C. Thomas	15:127-51
Theoretical Models of Star Formation	P. R. Woodward	16:555-84
THE GALAXY		
Nucleo-Cosmochronology	D. N. Schramm	12:383-406
On the Origin of the Light Elements	H. Reeves	12:437-69
High-Velocity Neutral Hydrogen	G. L. Verschuur	13:257-93
The Morphology of Hydrogen and of Other Tracers in the Galaxy	W. B. Burton	14:275-306
The Galactic Center	J. H. Oort	15:295-362
EXTRAGALACTIC ASTRONOMY		
Chemical Composition of Extragalactic Gaseous Nebulae	M. Peimbert	13:113-31
Stellar Populations in Galaxies	S. van den Bergh	13:217-55
Chemical Evolution of Galaxies	J. Audouze, B. M. Tinsley	14:43-79
The Radio Continuum Morphology of Spiral Galaxies	P. C. van der Kruit, R. J. Allen	14:417-45
Extended Extragalactic Radio Sources	D. S. De Young	14:447-74
Seyfert Galaxies	D. W. Weedman	15:69-95
Clusters of Galaxies	N. A. Bahcall	15:505-40
The Kinematics of Spiral and Irregular Galaxies	P. C. van der Kruit, R. J. Allen	16:103-39
OBSERVATIONAL PHENOMENA		
Compact X-ray Sources	G. R. Blumenthal, W. H. Tucker	12:23-46
The BL Lacertae Objects	W. A. Stein, S. L. O'Dell, P. A. Strittmatter	14:173-95
The Line Spectra of Quasi-Stellar Objects	P. A. Strittmatter, R. E. Williams	14:307-38
Soft X-Ray Sources	P. Gorenstein, W. H. Tucker	14:373-416
Extragalactic X-Ray Sources	H. Gursky, D. A. Schwartz	15:541-68
Masses of Neutron Stars and Black Holes in X-Ray Binaries	J. N. Bahcall	16:241-64

652 CHAPTER TITLES

GENERAL RELATIVITY AND COSMOLOGY

Radio Surveys and Source Counts
 Astrophysical Processes Near Black Holes
 Observational Tests of Antimatter
 Cosmologies
 Recent Theories of Galaxy Formation
 Gravitational-Wave Astronomy

D. L. Jauncey 13:23-44
 D. M. Eardley, W. H. Press 13:381-422
 G. Steigman 14:339-72
 J. R. Gott III 15:235-66
 J. A. Tyson, R. P. Giffard 16:521-54

INSTRUMENTATION AND TECHNIQUES

On-Line Computers for Telescope Control
 and Data Handling
 Instrumental Technique in X-Ray Astronomy
 Astronomical Applications of Echelle
 Spectroscopy

L. B. Robinson 13:165-85
 L. E. Peterson 13:423-509

Stellar Interferometry Methods
 Instrumentation for Infrared Astronomy

F. H. Chaffee Jr., D. J. Schroeder 14:23-42
 A. Labeyrie 16:77-102
 B. T. Soifer, J. L. Pilper 16:335-69

PHYSICAL PROCESSES

Equation of State at Ultrahigh Densities, I
 Neutrino Processes in Stellar Interiors
 Thermonuclear Reaction Rates, II

V. Canuto 12:167-214
 Z. Barkat 13:45-68

Equation of State at Ultrahigh Densities, II
 On the Pulsar Emission Mechanisms

W. A. Fowler, G. R. Caughlan, B. A. Zimmerman 13:69-112
 V. Canuto 13:335-80
 V. L. Ginzburg, V. V. Zheleznyakov 13:511-35
 T. R. Carson 14:95-117

Stellar Opacity
 Transition Probability Data for Molecules of
 Astrophysical Interest

R. W. Nicholls 15:197-234
